

Ask Good Questions

Leading Practice

In this tutorial, we will cover some leading practice considerations for constructing survey questions. Following these tips will help you to collect meaningful, actionable data.

Know Your Survey Goal

Define a goal and treat it as your north star through the entire survey building process. When creating questions make sure that each question serves your project goal.

Questions to ask when defining your goal:

- What do you want to learn?
- What actions do you plan to take?
- Who will take your survey/Who is your audience?

Consider Reporting & Exporting

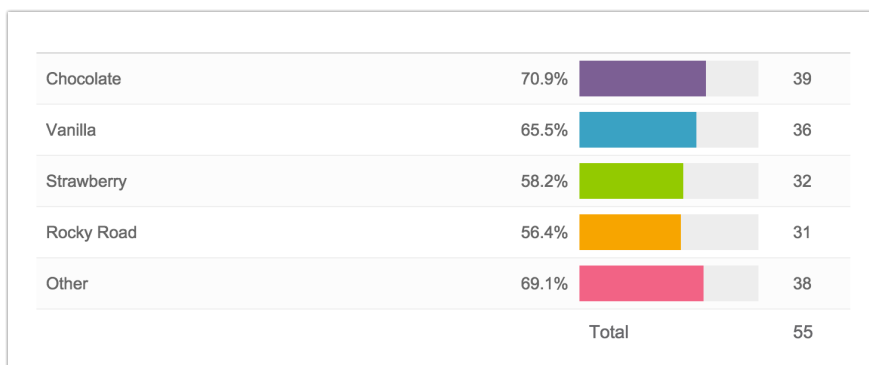

Probably the single most important consideration when choosing survey questions is to consider how a question reports and exports.

If you plan to use Alchemer reports, we recommend checking out how each of your questions will report. [Generate some test data](#) and run some test reports. Ask yourself, "Will this data allow me to draw conclusions I set out to address?" If not, consider a different question type.

Radio Button Question: What is your favorite ice cream flavor?

Checkbox Question: What ice cream flavors do you enjoy?

If you plan to export your raw data to analyze outside of Alchemer, it is equally important to [generate some test data](#) and run some test exports to be sure you have the data you need to perform your analysis.

Beware the Checkbox (and Other Multi-Select Questions)

Because multi-select questions allow respondents to select more than one answer, using these types of questions will considerably change your reporting and statistics.

In single-select questions the total will represent the total number of survey respondents (unless it is an unrequired question) and percentages for each answer option will be a percent of this total. However, in multi-select questions, the total will almost always be greater than the total number of survey responses (unless each respondent only selected a single answer option). This means that your percentages will add up to more than 100 (see above).

In addition, exports will have a field per answer option as opposed to a single field for the entire question. Considering these reporting differences in advance will save you a lot of heartache in the reporting phase of your project!

Each of our question type tutorials have examples of how the question will report and export. This is a great place to start when choosing question types!

Use Open-Text Fields Sparingly

Open-text questions are very fatiguing for survey respondents. If you use open-text questions, use them sparingly and whatever you do, *do not* require them. Finally, make sure that you act on this very expensive data.

Use Validation and Other Data Cleaning Tools

One of the trickiest things about open-text data is making it actionable in your results. Unvalidated open-text fields generally mean a mess of data as in the below example.

Please enter your job title:

Count	Response
1	Customer Support Rep
1	Service Rep
1	Support Hero
1	Support Rep
1	customer support rep

We recommend using some of the below tools when setting up your question to clean your open-text data and ensure that it is usable in your results.

- One of the quickest methods for cleaning up data entered into textbox questions is to select the option on the **Validation** tab to **Capitalize each word**. This will clean up your reporting a bit by eliminating case-sensitivity as a variation in your data.
- We have [Basic and Advanced Validation](#) tools available on the Validation tab of the question editor to ensure respondents' entries are in a format you expect.
- Our [Auto Suggest Answers](#) feature will suggest answers while the survey respondent types.
- Finally, if you know the list of possible answers and want to ensure that your data is tidy use a [Dropdown Menu](#) question type instead!

Asking Yes/No Questions

A common mistake new survey designers make is to choose a multi-select question type, like a checkbox, when asking a yes/no question. Because respondents will be able to select both yes and no, you'll risk collecting bad data.

1. Do you love : ?

☒ Yes
☐ No

2. Do you love : ?

-- Please Select --

-- Please Select --

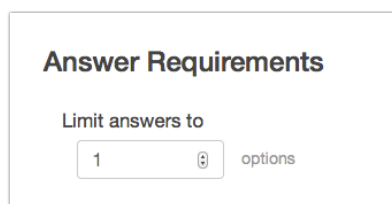

Yes

No

If you really prefer the look of the checkbox there are a couple of options to achieve this without risking bad data.

1. On the Validation tab of your checkbox question you can set up a limit to make a checkbox work as a single-select question. To do so go to the **Validation** tab and scroll to the **Answer Requirements** and enter 1 in the **Limit answers to** field.

2. You can take advantage of our icon options to change the selected radio button to have a check. See our [Icons Tutorial](#) to learn more!

Grid Questions Are Not Space Savers

Grid questions should only be used if you wish for your survey respondents to make comparisons. For example, in the below question survey respondents are implicitly making comparison across the various ice cream brands listed in the rows. If this is not the purpose of your grid question it is best not to use them. Packing a bunch of questions in a grid to save space and make your survey "seem" shorter will not serve you in the long run; grid questions are very fatiguing and can lead respondents to abandon your survey or, worse, give you bad data.

Indicate your level of satisfaction with the ice cream brands you purchase:

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied
Dairy Cream	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Tasty Treat	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Wholesome	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Sugar Cow	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Ice Dream	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Jill's	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Mike and Sammy's	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Cold Cream	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Homemade	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Watch Out for Double-Barreled Questions

A double-barreled question basically means that you have asked more than one question but have only allowed for a single answer. See the below example. What if I am very satisfied with the produce selection but not the meat selection? Some respondents might select one or the other. Others might average their satisfaction. Either way, you're getting bad data!

How satisfied are you with the selection of meats and produce and the Grocery Mart?

Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Consider Interactive Questions versus Traditional Questions

Some questions types are tried and true, like [Radio Buttons](#), [Checkboxes](#) and [Rating \(Likert Scale\) Questions](#). Others are more novel and interactive, for example, the [Drag & Drop Ranking](#) and [Slider](#) questions. It is important to take this into consideration when choosing your question types. Questions that are more interactive are generally more engaging for survey respondents. While this will almost always be a good thing, there are some populations, those that are less tech savvy for example, who may prefer the more traditional questions.

5. Traditional Checkbox

- ☐ Chocolate
- ☐ Vanilla
- ☐ Strawberry
- ☐ Butter Pecan
- ☐ Rocky Road

6. Interactive Drag & Drop Ranking

Drag items from the left-hand list into the right-hand list to order them.

If you are planning to compare data over time, changing from a traditional question, say a Rating question, to a more interactive question, like a slider may bias your results. New respondents might be encouraged to answer based on the fancy new interaction, thus changing the characteristics of the sample you are using to draw conclusions. Similarly, respondents who previously answered in a different format may answer questions differently in a survey with a new interaction, further biasing any changes you wish to measure.

Keep it Short and Sweet

Keep language in both question titles and answer options short and simple. Question titles should be meaningful on their own.

Ensure Your Answer Options Do Not Overlap

Regardless of the question type, it is important to be sure you do not overlap answer options. This most often happens when you use ranges as answer options. For example, date ranges like the

below.

2. In what year were you born?

✓ -- Please Select --

- 1910 - 1919
- 1920 - 1929
- 1930 - 1939
- 1940 - 1949 ✓
- 1950 - 1959
- 1960 - 1969
- 1970 - 1979
- 1980 - 1989
- 1990 - 1999
- 2000 - 2009

1. In what year were you born?

✓ -- Please Select --

- 1910 - 1920
- 1920 - 1930
- 1930 - 1940
- 1940 - 1950 ✗
- 1950 - 1960
- 1960 - 1970
- 1970 - 1980
- 1980 - 1990
- 1990 - 2000
- 2000 - 2010

Add Opt-Out Answer Options to Required Questions

Required questions must have an answer option for everyone; otherwise, you risk collecting bad data. If you are not 100% sure that your list of answer options will apply to all survey respondents, add an opt-out answer option such as other, none of the above, not applicable. Check out our [Answer Option Special Settings Tutorial](#) to learn how to set this up!

What is your favorite color?

- ☐ Red
- ☐ Yellow
- ☐ Green
- ☐ Blue
- ☐ Other

Ensure Opt-Out Answer Options Are Exclusive

Whenever you provide opt-out answer options, such as None of the Above and NA, make sure that they are exclusive, meaning, they cannot be selected in combination with other options. Using our [Answer Option Special Settings](#) this is easy to do! See the below example where selecting None of the above makes the other answer options unselectable.

Which locations have you visited?

- ☐ Boulder
- ☐ Denver
- ☐ Steamboat Springs
- ☐ Ft Collins
- ☒ None of the above

Keep Scales Consistent

If you are using scale questions, layout matters. We've found that for left-to-right languages, scales that are laid out from worst/least to best/most are a standard layout with which most respondents will be familiar.

A perhaps more important concern is to keep your scales consistent. Flipping the layout, so that best is on the left and worst is on the right, is generally not a good idea as respondents might miss the change.

1. Please indicate your level of satisfaction with our products:

1 - Very Dissatisfied	2 - Dissatisfied	3 - Neutral	4 - Satisfied	5 - Very Satisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

2. Please indicate your level of satisfaction with our service:

 5 - Very Satisfied	4 - Satisfied	3 - Neutral	2 - Dissatisfied	1 - Very Dissatisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Our position with respect to the debate around odd numbered scales with a neutral point in the middle versus even scale is to use whatever works for you. We do, however, firmly believe that your scales should remain consistent, within a survey and across surveys. This will make it easy to make comparisons across questions. Using consistent scales will also make data comparable over time.

1. Please indicate your level of satisfaction with our products:

1 - Very Dissatisfied	2 - Dissatisfied	3 - Neutral	4 - Satisfied	5 - Very Satisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

2. Please indicate your level of satisfaction with our products:

 1 - Very Dissatisfied	2 - Dissatisfied	3 - Somewhat Dissatisfied	4 - Neutral	5 - Somewhat Satisfied	6 - Satisfied	7 - Very Satisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Follow Conventions for the Orientation of Answer Options

Scale or quantitative questions should be horizontal.

1. Please indicate your level of satisfaction with our products:

1 - Very Dissatisfied	2 - Dissatisfied	3 - Neutral	4 - Satisfied	5 - Very Satisfied
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Categorical answer options should be vertical.

4. Which locations have you visited?

- ☐ Uptown
- ☒ Midtown
- ☒ Downtown
- ☐ Exclusive / None of the above

3. Do you love ?

☒ Yes

☒ No
